

Standard Products

Lumenelle has a growing list of standard products that may satisfy the need.

Historic Preservation / Hybrid Restoration

Simply put, Lumenelle can design and manufacture a fixture that looks similar to the vintage original, but yet incorporates today's lighting technology.

Lumenelle Custom

At approximately 25-50 pieces or more, custom can become competitive with standard products. With custom, a much wider range of finishes, materials, and lighting performance

available. Lumenelle can create fixtures from as little as a client's napkin sketch. Additionally, the client may see a demonstration using a working prototype of the design. Final decisions can then be confirmed with respect to lighting performance and cosmetics. This helps the client finalize their decisions, feel good about their purchase, and buys in satisfaction.

Retrofits

Total installed cost can often be reduced by retrofitting the existing fixtures / housings / boxes etc. to improve lighting performance and reduce energy consumption.

Lumenelle can create drop-in retrofit kits permitting fixtures to be modified on-site.

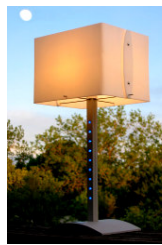

Modified Products

Is there a standard product by any other manufacturer whose product(s) would satisfy the client's need with certain modifications?

Lumenelle can modify another manufacturer's products to meet the client's lighting performance and/or aesthetic requirements.

Finding The Solution

- Site Inspections
- Product Evaluations
- Rapid Prototyping

Commercial Grade Portable Lamps

(Indoor and/or outdoor)

For hospitality or commercial environments, Lumenelle makes it possible to create lighting families containing fixtures, chandeliers, wall

sconces, and/or portable lamps, all matching in style and finish.

Product Evaluations "Know What You Are Specifying"

Lumenelle's product design team has over a half century of experience in designing products to meet tough environmental military

Standards such as MIL-810-D. Lumenelle can put that experience to work for you and let you know what to expect...

- ❖ Before you specify them,
- ❖ Before they are purchased,
- ❖ Before they are installed,
- ❖ Before they fail.
